Thank you for choosing to grow with Sunleaves Garden Products! Your satisfaction and success are important to us. For best results, carefully read the following instructions before using your Sunleaves SUPER Sprayer.

- Made from Heavy-Duty Polypropylene Plastic
- Built-in Pressure Gauge and Safety Valve
- Convenient Spraying Lance Holster
- Removable Nylon Shoulder Strap included

### Using the Sunleaves SUPER Sprayer

#### Assembly Instructions:
1. Inspect box contents to ensure all parts are included and undamaged.
2. Install the Trigger/Lance O-Ring over the threaded end of the trigger.
3. Screw the threaded end of the Lance onto the end of the trigger. Tighten firmly by hand.

#### Operation Instructions:
1. Unscrew the pump from the tank using the pump handle, turning in a counterclockwise direction.
2. Pull the pump completely out of the tank. Fill the tank with up to five liters of the liquid you intend to spray.
3. Slide the pump back into the tank. Using the pump handle, screw the pump into the tank, turning in a clockwise direction. Tighten firmly by hand.
4. With the pump handle in the unlocked position, pump it several times. The red marking on the pressure gauge indicates maximum air pressure (3.5 Bar). Once the desired pressure is achieved, push the handle down completely and turn clockwise to lock handle in place.
5. To dispense, squeeze the trigger handle to begin flow of liquid.
6. To relieve the tank of all pressure, pull up on the Safety Valve located on the opposite side of the tank from the hose.

#### CAUTION: It is important to relieve all pressure from the tank before removing the pump or hose from the tank.

#### Maintenance:

The Sunleaves SUPER Sprayer comes with one replacement Trigger Base O-ring, one replacement Pump Seal and one replacement Pump Diaphragm.

1. Unscrew the large brass cap underneath the trigger handle to reveal the Trigger base O-Ring and trigger spring.
2. Remove the pump from the tank to reveal the Pump Seal at the top of the pump threading.
3. The Pump Diaphragm is located inside the pump body. To replace the Pump Diaphragm, remove the pump from the tank. Using a flathead screwdriver, unlock the plastic collar at the top of the pump threading. Once unlocked, pull up on the handle. The Pump Diaphragm is located at the end of the pump shaft.

To clean the Sunleaves SUPER Sprayer, empty any liquid remaining in the sprayer. Fill with clean soapy water up to 5L. Pump the handle several times to build pressure in the tank, then spray out the soapy water. It may be necessary to completely disassemble the sprayer to remove salt buildup.
